

Screenshot Report.

Every capture from the 2026 premium frontend pass — before, during, and after.

Ten captures in chronological order: the flat welcome card the pass started from, the design explorations that set direction, and the shipped result across welcome, gallery and loupe.

Project	Captures	Companion	Status
FrameGrade (street-story-curator/frontend)	10 · 24 Aug 2026, 11:22 – 15:01	Premium Frontend Walkthrough (PDF)	● All verified

A Where we started — the "before" captures

Three captures from the morning session, before the premium pass landed. The pattern across all three: flat surfaces, no elevation, no hover language, and a welcome card doing nothing but existing.

Fig. 1 Welcome card — browser **BEFORE**

../app_screenshot2.png · captured 13:31 · 1600×900

What to notice: the original flat card — version chip, one outline CTA, resume strip. Nothing is wrong individually; collectively there is no hierarchy, no depth, and no brand moment. This is the frame the user's "hackjob" reaction came from.

Fig. 2 Welcome card — in-app capture BEFORE

../screenshots/live-app-home.png · captured 11:22 · 1660×1024

What to notice: same card from the app's own screenshot path. The ground is a lighter grey (#1a1a1a era) and the card barely separates from it — the elevation ramp re-step later fixed exactly this distance problem.

Fig. 3 Working session context BEFORE

../app_screenshot.png · captured 13:29 · dual IDE + terminal

What to notice: the session this pass came out of — the audit conversation and a backend connection error in the terminal. Included for provenance: the premium pass started as a frontend reaction, but the same session surfaced the backend issue visible here.

B Design exploration — setting the direction

Two design-board mocks from the late-morning exploration. These established the vocabulary the pass later implemented: dense develop-style panels, hairline dividers, and the rule that photos own all the colour.

Fig. 4 Develop-style workspace mock EXPLORATION

../screenshots/demo-workspace.png · captured 11:22 · 1660×1024

What to notice: the exploration that defined the three-zone layout — catalog sidebar, loupe stage, verdict rail. The green grade breakdown bars here evolved into the colder teal (`--grade-strong`); the warm photo against neutral chrome is the governing rule working as intended.

Request deep analysis

What to notice: the full design-board artifact with the workspace mock at top. Its header tagline — "flat chrome · dense panels · photos own the colour" — became the literal acceptance criteria for the token system documented in the companion walkthrough.

C The shipped result — after the premium pass

Five captures of the redesigned UI. The hero evolves across three of them (intermediate → final); the gallery and loupe show the token system holding up under real load — 4,151 photos in the catalog.

Fig. 6 Welcome hero — first redesign **AFTER**

cdp-shots/1_welcome.png · captured 14:06 · 1600×900

What to notice: the new hero structure in place — aperture brand row, `FrameGrade.` display headline with the mark-coloured full stop, three-verb feature strip, resume strip. The CTA is still the old weak `solid` variant at this point.

Fig. 7 Welcome hero — token re-step verified AFTER

cdp-shots/hero_check.png · captured 14:40 · 1600×900

What to notice: same layout after the ground/ink re-step — deeper well, crisper ink, ambient glows reading behind the card. RAM alarm chip (top right, amber `--alarm-warn`) demonstrates the status-chrome exception working.

Fig. 8 Welcome hero — final, inverted-ink CTA AFTER · FINAL

cdp-shots/hero_ink_cta.png · captured 15:01 · 1600×900

What to notice: the shipped state. The `ink` variant — full-luminance white fill, well-coloured label — gives the one primary action unmistakable weight while staying strictly neutral. This capture is the reference for the hero in the companion walkthrough.

Fig. 9 Gallery grid — 4,151 photos under load AFTER

cdp-shots/2_gallery.png · captured 14:06 · 1600×900

What to notice: the rating filter bar (star tiers, Unrated 21,292, Duplicates 17,265), score-sorted mono numerals, teal strong-grade rules under cells, and the selection outline on the first cell. Cell thumbnails were still decoding in this headless capture — the chrome is the subject here.

Fig. 10 Loupe + verdict rail AFTER

cdp-shots/3_loupe.png · captured 14:06 · 1600×900

What to notice: the full judgement surface — photo on the near-black well, Mid verdict chip, tabular `.520` score, plain-English verdict copy, Judge's Eye coaching notes (Focus / Exposure), and the filmstrip rail along the bottom with per-frame grade rules. Warm colour appears only inside the photographs — the chrome stays out of the way.
